

## LIPO-FREEZE BODY CONTOURING

Lipo-Freeze body contouring uses a process called CRYOLIPOLYSIS, a FDA approved procedure that freezes the unwanted subcutaneous fat cells in areas such as waist, hips, thighs, buttocks, and underarms that causes those fat cells to die. The dead fat cells are then reabsorbed and removed by the body, giving you permanent body sculpting results. The procedure is safe, non-invasive, pain free, and only takes approximately 1 hour per session without any down time as in surgical procedures. Also at a fraction of the cost of lipo-suction. Permanent results from Lipo-Freeze procedures are significantly noticeable in just 90 days and safe to do again for more fat reduction if desired.
